

Your Region Dynamic and Diverse?

The evidence from the 2006 Census **Regional Forums**

The Spatial Analysis and Research Branch of the Department of Planning & Community Development will be visiting your region to present and discuss the highlights of the 2006 Census. Each event offers the opportunity to better understand your region – the trends and their drivers. We hope you can join us to talk and learn about population trends and prospects, social diversity and other issues being raised by the Census.

Find out

- How has your region changed since the last census?
- How does your region compare to others?
- What are the drivers of these trends?
- How can understanding these trends inform and support decision making?

Your feedback... let's discuss

- Having heard the trends, do you think they will change and why?
- What are some of the implications of these trends?
- What are the region's prospects?

Your feedback will help us update the Victoria in Future 2008 projections of populations and households.

When and where

Each Regional Forum is free to attend and includes lunch. Sessions begin at 9.30am and end by 1.00–1.30 pm. Future forums will take place in centres such as Warrnambool, Horsham, Mildura and Bairnsdale in 2008.
